

Cell-expanded gene-expression accuracy across immune populations

GSE120575 · 7,858 Observed Post cells · 1,664 deterministic proxy cells per method · 834 genes

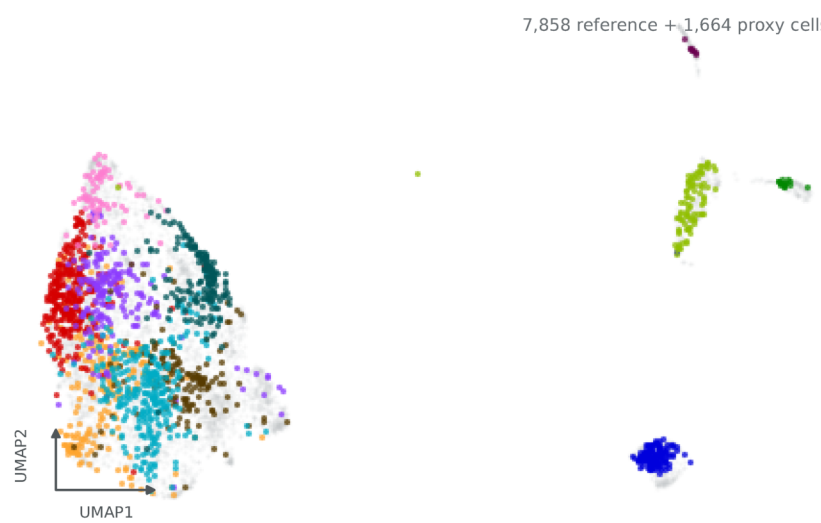

A. Observed Post reference

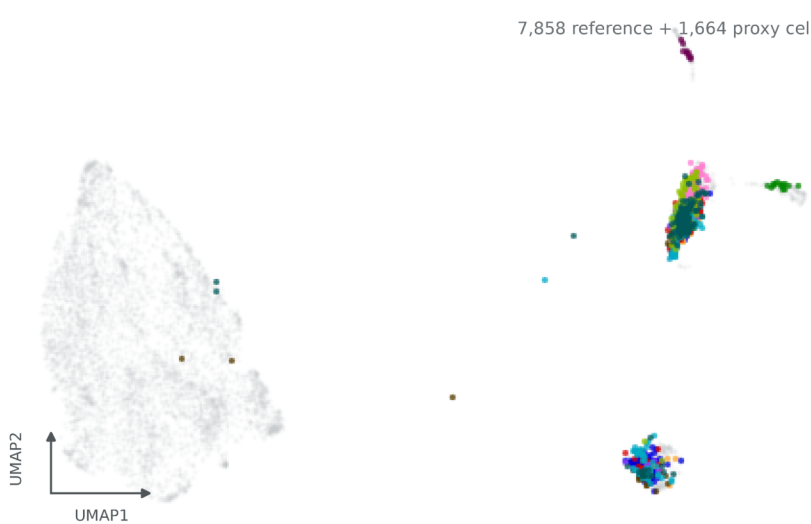

B. scGen

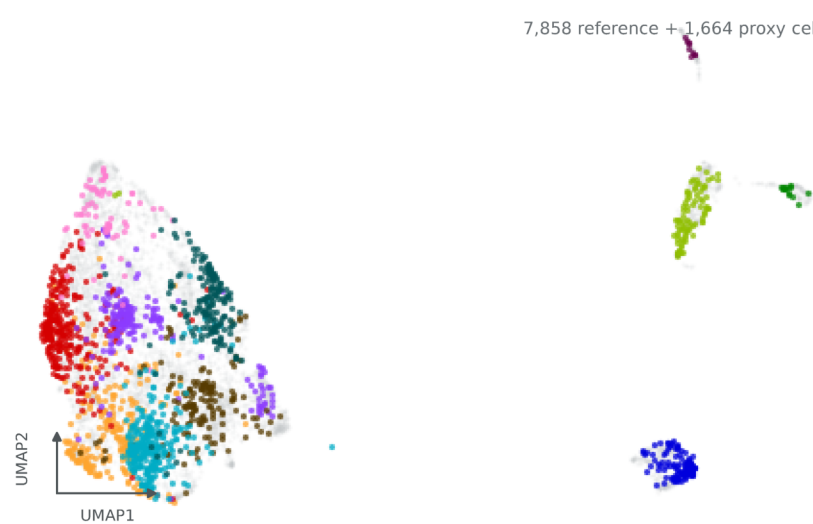

C. WOT

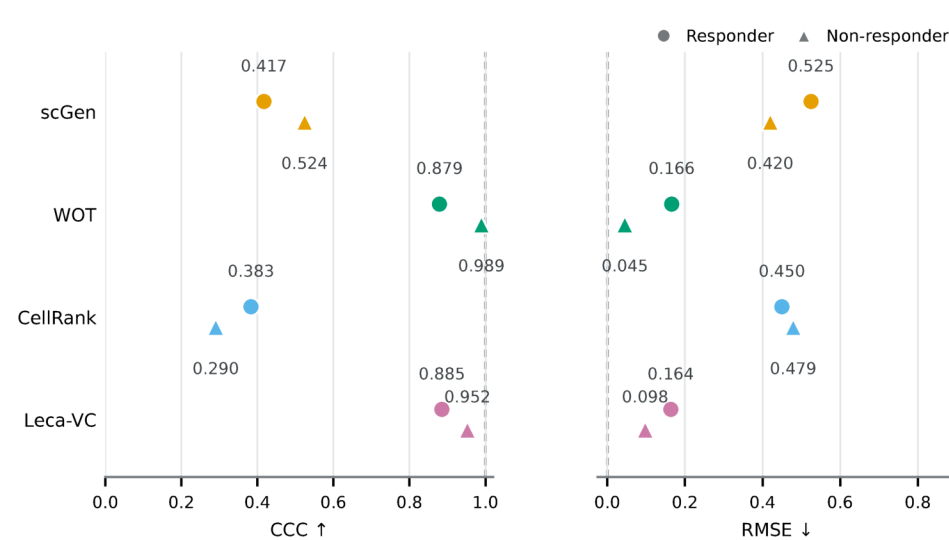

D. CellRank

E. Leca-VC

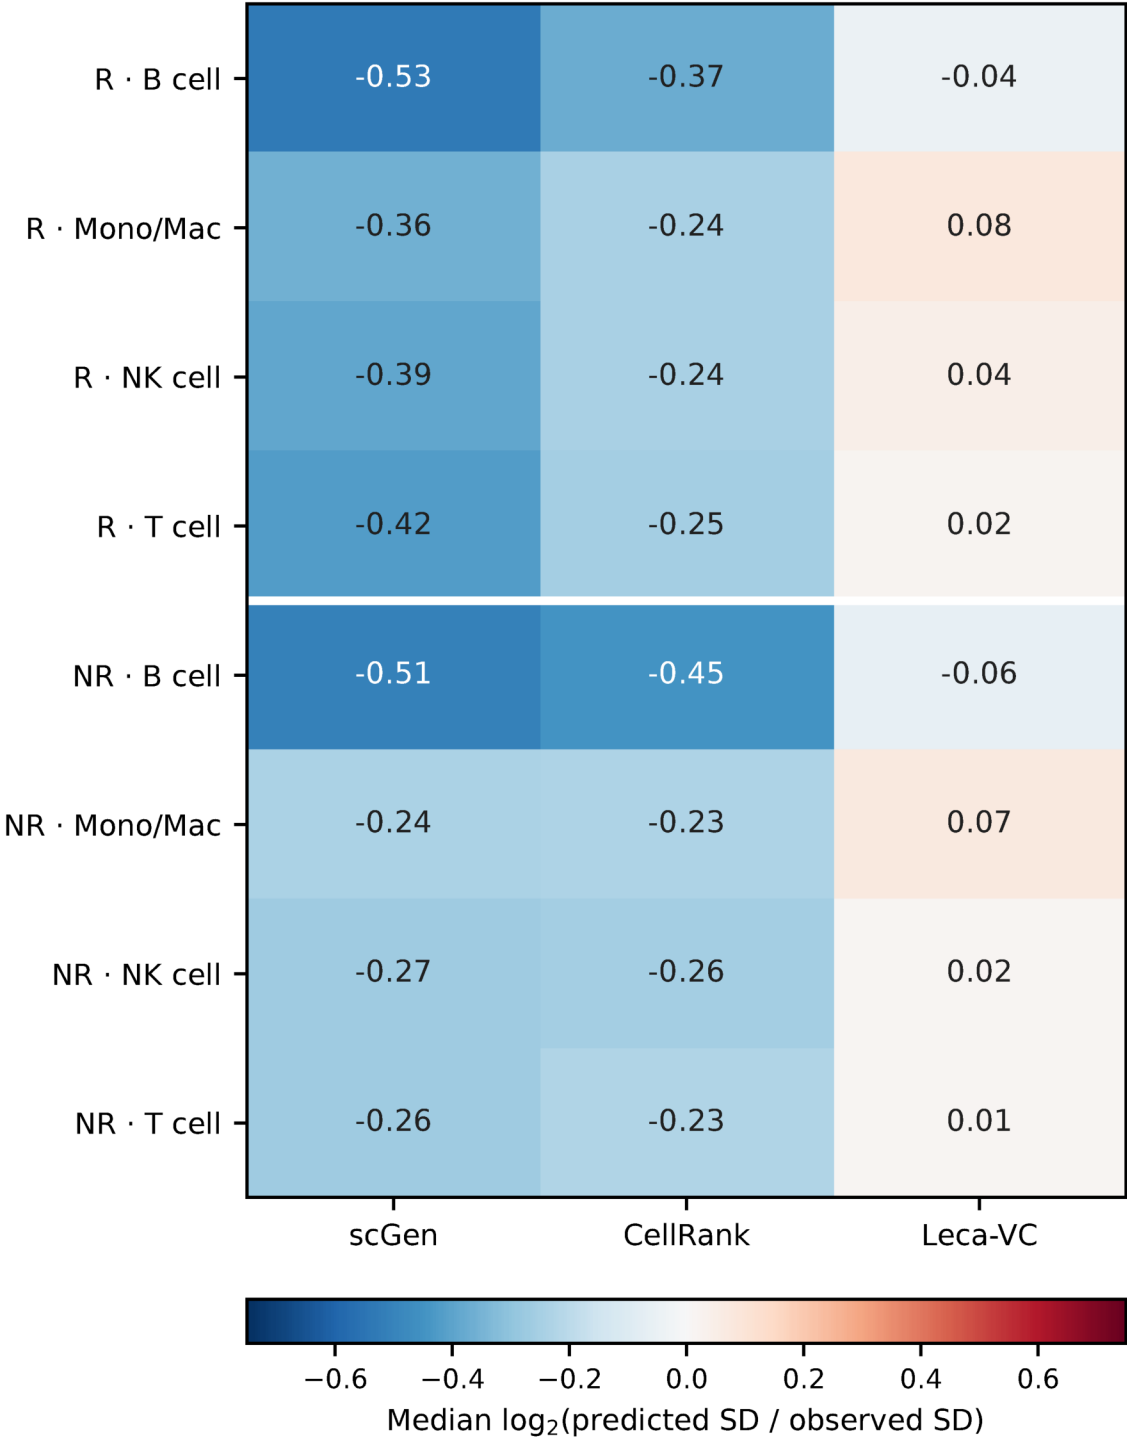

F. Post-treatment expression fidelity

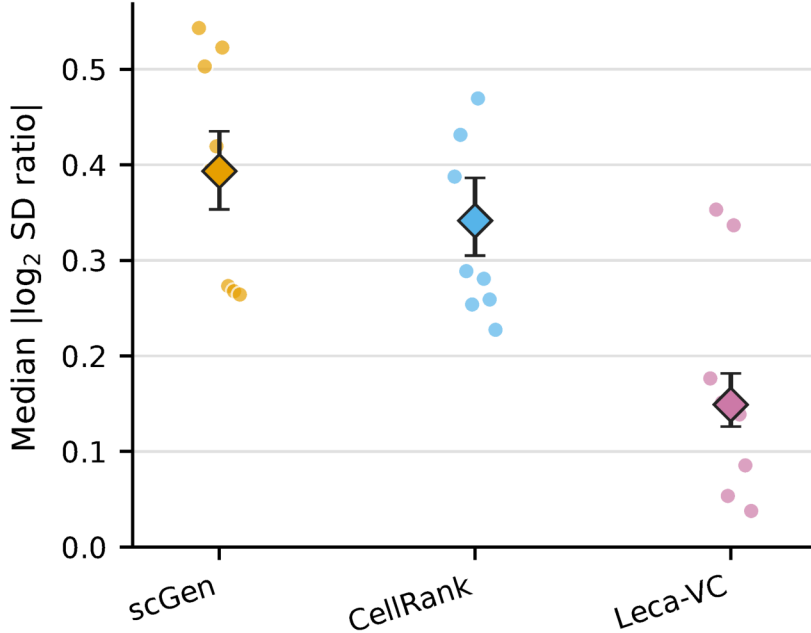

Within-Cell-Type Expression Heterogeneity Recovery

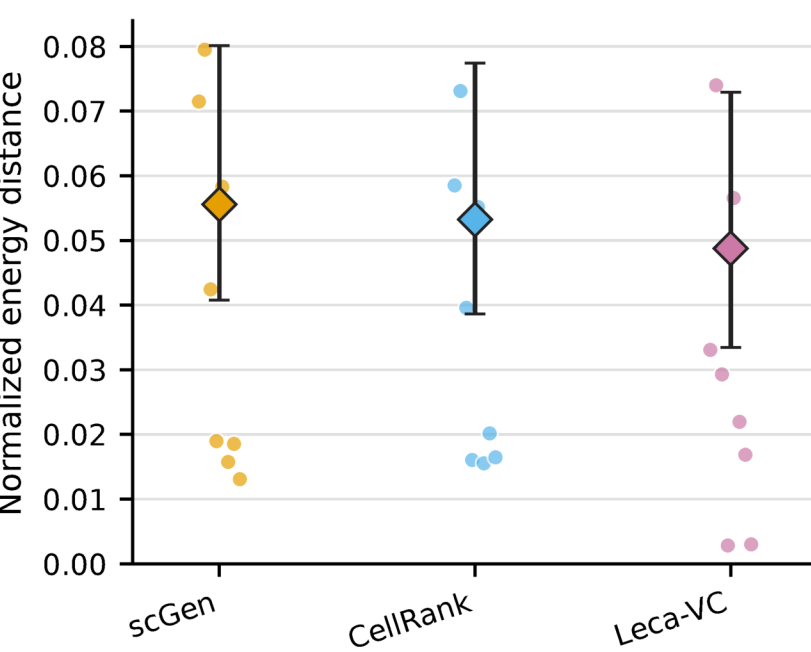

G Dispersion ratio

H Dispersion error

I Distribution distance

Post-hoc cell-expanded sample-level expression proxies; not native single-cell predictions. Population labels are inherited from real source Pre cells. Panel F reuses the recomputed response-level sample-expression CCC and RMSE values from the 834-gene benchmark. WOT is target-derived.
